Saline County Ambulance in Missouri

## Why Morton designBUILD

Morton Buildings is committed to partnering with firms like yours. Whether you're working on a publicly funded building or a custom project in the private sector, Morton makes the process easy by providing all the resources necessary to aid in the development and completion of your structure.

Morton's designBUILD team consists of project managers, construction estimators, drafting technicians and construction coordinators who have years of building experience. Working with skilled architects and engineers like you, we are able to provide the complete design/build package.

From coordinating site work, delivering materials, constructing the building and coordinating the subcontractors through completion, the Morton designBUILD team can handle as much or as little of the building envelope as you desire. All of Morton's employees, from the drafting technicians to those who manufacture building components and construct the buildings, are all company-trained professionals dedicated to delivering a quality product.

## Our Company

Morton designBUILD is a division of Morton Buildings, Inc. which is a family-owned company with a national footprint. We have company-owned sales offices located across the country and have buildings in nearly all 50 states. This allows us to partner with you wherever your client's building needs

may be. Because our company-trained sales consultants are located throughout the country too, we have the ability to mobilize to our customers or vendors as needed. These same sales consultants are also continually bringing in new opportunities for future projects.

Morton's structures aren't just single-story box buildings. We can accommodate your vision of the ideal space and even construct multiple-story buildings. The options for different features and styles on our buildings are as expansive as our customer's ideas. In fact, you might be surprised to find that some of the buildings you have admired in the past are Morton post-frame buildings.

## Green Legacy

Morton has a history of integrating "green" or environmentally friendly principles into our general building practices.

We are proud to be an ENERGY STAR® partner and employ LEED® Accredited Professionals to help customers who want to achieve certification. We have been involved in a number of projects where the customer wants an environmentally friendly structure. We are particularly delighted to have several projects that have received the ENERGY STAR Label while others have been LEED certified.

## Morton Buildings Locations Map

### **Why Post-Frame**

Morton specializes in post-frame construction, which provides the ultimate flexibility in design and virtually unlimited options when it comes to the building layout. That is because post-frame buildings use a truss system that allows for high, open spaces and wide, clear spans.

Engineered to meet specific building project requirements, this wood-frame building system features large, laminated columns instead of wood studs, steel framing or concrete masonry. The strength lies within the framing system, which forms a tremendously wind-resistant shell. Due to the natural insulating qualities of wood, and the wide spacing between columns allowing for continuous blankets of insulation, a post-frame building is more energy efficient than other building methods. The finished product is a cost-effective, energy efficient structure that is aesthetically pleasing.

While post-frame has been the leader in our product mix, we also have options for steel frame and hybrid buildings.

### **The Bid Process**

#### **Public Entities**

Let Morton do the “grunt work” for your bid project. We can provide the basic layout for the shell that would wrap around your design. We can also provide you with structural specifications and wall details early in the process. When needed, we can also provide you with certified structural drawings and preliminary budget numbers.

#### **Private Entities**

As a member of your design/build team, we provide behind the scenes support for you. We can calculate load requirements and do the research and preparation you need for your project. As churches are a large part of the private sector, keep in mind that Morton is the largest church builder in the country.

*“When you partner with Morton designBUILD, you’re truly working with dedicated team members throughout the entire process. I use the word team because our group works as a cohesive unit with your team of design professionals to put together a finished product – big or small – that’s done accurately, efficiently and effectively. That means the process is easy for everyone, which speaks to our extensive experience of working with design professionals like you.”*
